## 2024\_28\_III\_OOPS Using Java Lab

### 2028\_REC\_OOPS using Java\_Week 3\_Q1

Attempt : 1  
Total Mark : 10  
Marks Obtained : 10

#### Section 1 : Coding

##### 1. Problem Statement

Rosh is intrigued by numerical patterns. Today, she stumbled upon a puzzle while working with arrays. She wants to compute the sum of the third-largest and second-smallest elements from a list of integers. She seeks your help to implement a program that solves this for her efficiently.

##### ***Input Format***

The first line of input is an integer N, representing the size of the array.

The second line of input consists of N space-separated integers, representing the elements of the array.

##### ***Output Format***

The output displays a single integer representing the sum of the third-largest and second-smallest elements in the array.

Refer to the sample output for the formatting specifications.

### **Sample Test Case**

Input: 10

10 20 30 40 50 60 70 80 90 100

Output: 100

### **Answer**

// You are using Java

import java.util.\*;

class Main{

public static void main(String[] args){

Scanner scan = new Scanner(System.in);

int n = scan.nextInt();

int[] arr = new int[n];

for(int i=0;i<n;i++){

arr[i]=scan.nextInt();

}

for(int i=0;i<n;i++){

for(int j=i+1;j<n;j++){

if(arr[i]>arr[j]){

int temp=arr[i];

arr[i]=arr[j];

arr[j]=temp;

}

}

}

int sum=arr[n-3]+arr[1];

System.out.println(sum);

}

}

**Status :** Correct

**Marks :** 10/10
