Attempt : 1
Total Mark : 10
Marks Obtained : 10

Section 1 : COD

1. Problem Statement

In a ticket reservation system, you store the available seat numbers in a TreeSet. Users input their desired seat number, and the program checks whether the chosen seat is available.

Using a TreeSet ensures quick and efficient verification of seat availability, ensuring a smooth and organized ticket booking process.

Input Format

The first line of input contains a single integer n, representing the number of available seats.

The second line contains n space-separated integers, representing the available seat numbers.

The third line contains an integer m, representing the seat number that needs to be searched.

Output Format

The output displays "[m] is present!" if the given seat is available. Otherwise, it displays "[m] is not present!"

Refer to the sample output for the formatting specifications.

Sample Test Case

Input: 4

2 4 5 6

5

Output: 5 is present!

Answer

```
// You are using Java  
import java.util.*;
```

```
public class Main
```

```
{
```

```
    public static void main(String[] args)
```

```
{
```

```
    Scanner sc = new Scanner(System.in);  
    int n = sc.nextInt();  
    TreeSet<Integer> seats = new TreeSet<>();  
    for (int i = 0; i < n; i++)
```

```
{
```

```
        seats.add(sc.nextInt());
```

```
    }  
    int m = sc.nextInt();  
    if (seats.contains(m))  
        System.out.println(m + " is present!");  
    else  
        System.out.println(m + " is not present!");  
  
}  
  
}
```

Status : Correct
